Wiki: A backronym was coined to say Wiki stands for "What I Know Is" but it is actually Hawaiian for "quick."

Hardware

PC hardware has some funny names that we just take for granted, but they had to come from somewhere.

Bluetooth-named for the Dread Pirate Roberts, ehm, the Dread King Bluetooth of Scandinavia, whose real name was Harald Gormsson. Apparently he had a pretty gnarly smile. No one knows for sure what Intel engineer Jim Kardach was really thinking when he came up with this codename, but it's so much cooler than calling it Personal Area Network (PAN) that we're glad the name stuck.TWAIN: a standard for hardware interoperability, this was originally a type of technology without an interesting name, until someone was inspired by Rudyard Kipling to borrow from the Ballad of East and West, since it seemed that "…never the twain shall meet."

PYTHON & R PROGRAMMING
